## EXPERIENCE

---

### SAP Package Consultant | IBM | Full-Time

October 2025 - March 2026

- Collaborating within the Technical Platform Solutions division as a Technical Writer and Solution Architect on SAP deployments for Australian Defence, producing quarterly architecture and migration documentation that establishes the foundational technical requirements and dependencies for initiatives across other divisions.
- Developing SAP Extensions Development using BTP to customise ERP deployment for clients. CAP and Fiori Development in BTP's Business Application Studios, deployed on Cloud Foundry runtime.

### Wordpress Developer | Church Grounds | Part Time

April 2024 - May 2025

- Assisted non-profit organisation Church Grounds in developing and deploying an e-commerce platform for coffee-related products using WordPress, WooCommerce, cPanel and AWS Lightsail.
- Developed the e-commerce platform from the ground up, delivering its first production-ready iteration within six months.
- Communicated with technical and non-technical organisation members to provide project updates and gather requirements, collaborating with developers and volunteers to adapt the UI to evolving business needs.

### Coding Tutor | AppyCoding | Casual Employment

June 2022 - April 2024

- After school tutoring primary school kids in Scratch programming language/game engine, Microsoft MakeCode for micro:bit and basic robotics.
- Explaining fundamental programming concepts such as control flow, variables, computation and memory.
- Encouraging self-learning and experimentation.

### Shack Tutoring | UNSW Arc

February 2022 - November 2022

- Volunteer tutor for high school students in subjects of English and Maths.
- Coordinating meeting times with students and offering general career advice

## PROJECTS

---

### Grocery Store Price Tracking

January 2026 - Present

- Open source full stack application scraping 20,000+ products grocery prices daily from Woolworths and Coles web pages using Playwright, storing in a time series database and display pricing history of products
- Pnpm monorepo comprised of scraper app operating on a daily cron schedule, interfacing with repository pattern to write product details, prices, unit prices and value to Postgres extended database
- Sveltekit frontend app interfacing with Postgres via repository pattern, server side loading data
- Github Actions pushing containers to Docker Hub Container Registry on release
- Docker Compose continuous deployment on VPS, using Watchtower container to pull in changes to containers
- <https://github.com/edward-20/Grocery-Tracker> <https://ausgroceriescomparison.store/>

### Waiting Management System for Restaurants via Django and React

Feb - April 2024

- Full stack application to optimise restaurant operations and elevate customer experience by facilitating efficient order management, assistance requests, and bill settlement
- Scrum methodology to deliver the product in 3 sprints with planning, standups, demos to client and retrospectives
- React frontend using Vite, Shadcn, Chakra UI, MUI, interfacing with backend via AJAX requests to RESTful API
- Django backend with Django Rest Framework library, using Django's ORM to interface with SQLite database

## EDUCATION

---

### The University of New South Wales | Randwick, NSW

Feb 2019 - May 2024

B.S. in Computer Science (Minor in Maths)

## TECHNICAL SKILLS

---

**Programming Languages:** Python (Bs4, re, ), NodeJS, WebJS, Typescript, Shell, Haskell, Java, Go, C++20, C

**Frameworks:** React, Svelte, Angular, Wordpress

**DevOps:** Git, Scripting, Agile (Jira), OpenAPI, Docker, Github Actions, AWS

**Testing:** Playwright, Vitest, PyTest, Testcontainers     **Databases:** Postgres, TimescaleDB, InfluxDB3 SQLite
